Skill Problem no. 5

5.

A screenshot of a terminal window with a dark background. The window title bar shows 'chinn@LAPTOP-RDULKNPB: ~' and standard window controls. The terminal content shows the GNU nano 8.7.1 editor editing a file named 'skill_5.c'. The code is a C program that reads a command/string from stdin and prints it back with various annotations. The code is as follows:

```
GNU nano 8.7.1 skill_5.c *
#include <stdio.h>
#include <string.h>

int main() {
    char input[200];

    printf("Enter a command/string: ");
    fgets(input, sizeof(input), stdin);

    input[strcspn(input, "\n")] = '\0';

    printf("\nOriginal Input: %s\n", input);

    printf("\nSingle Quotes:\n");
    printf("Single quotes preserve literal content and ignore variable expansion.\n");

    printf("\nDouble Quotes:\n");
    printf("Double quotes preserve spaces and allow variable expansion.\n");

    printf("\nParsed Result: %s\n", input);

    return 0;
}
```

Output:

```
chinn@LAPTOP-RDULKNPB: ~$ nano skill_5.c
chinn@LAPTOP-RDULKNPB: ~$ gcc skill_5.c -o skill_5
chinn@LAPTOP-RDULKNPB: ~$ ./skill_5
Enter a command/string: echo 'hello world' "Welcome to Os"

Original Input: echo 'hello world' "Welcome to Os"

Single Quotes:
Single quotes preserve literal content and ignore variable expansion.

Double Quotes:
Double quotes preserve spaces and allow variable expansion.

Parsed Result: echo 'hello world' "Welcome to Os"
chinn@LAPTOP-RDULKNPB: ~$ |
```
